

Unified Communications with Microsoft OCS

Fulfilling the promise of UNIVERGE®360

NEC's UNIVERGE360 provides your workers with tools that enable them to communicate in the medium and method they choose without compromising simplicity and flexibility. These tools empower employees and connect them to people, information and applications that will help your business grow.

Unified Communications with Microsoft LCS/OCS demonstrates how UNIVERGE360 can provide value to your company through its integration of Microsoft® Office Communication Server 2007 (OCS) and Outlook®, two of the most popular business communications tools available.

Integration to Microsoft applications – including Microsoft® Office Communication Server 2007 (OCS) and Outlook® - is an optional component of the UC for Enterprise solution. The core NEC component of this solution, the UNIVERGE OW5000, provides layered architecture and standardized interfaces.

At a Glance

- Seamless integration between Microsoft and NEC products
- Full-featured voice capabilities
- Open architecture provides choices
- Integrated collaboration with Microsoft Outlook

Seamless Integration between Microsoft and NEC Products

NEC's OCS Link enables organizations with NEC telephony-based systems to take advantage of the productivity-enhancing features of Office Communication Server 2007. Integration to Microsoft Live Communication Server 2005 is also available. The solution requires the NEC OW5000 Mediation Server which connects to NEC voice servers with NEC's OAI protocol. The CSTA protocol is used to connect the OW5000 to Microsoft's OCS product.

Full-Featured Voice Capabilities

While some customers may prefer a pure OCS integration for their communications platform, combining the NEC voice solution with OCS provides a rich telephony feature set along with proven resilience and reliability for mission critical telecommunications.

Open Architecture Gives Choices

A key challenge facing organizations today is the question of how to embrace and harness the potential benefits of emerging technology—empowering employees and entire organizations—while protecting existing telecommunications investments. NEC's open architecture provides choices.

At NEC, we are sensitive to the need for investment protection. NEC offers advanced solutions built on secure, reliable platforms for popular applications and commonly accepted protocols. OCS and LCS Link are only one example of how NEC's open architecture emphasizes interoperability and gives customers choices and a sure migration path to the future.

Integrated Collaboration with Microsoft Outlook

MS Office Communicator 2007 is a unified communications client that enhances productivity by enabling employees to utilize a host of communications options including voice, video and instant messaging (IM). MS Office Communicator enables employees to initiate one-to-one phone calls, multi-party conferencing and even video conferencing from the desktop. The client integrates with other Microsoft applications such as Outlook to allow click-to-dial and presence information for Outlook contacts. A user's status can be viewed inside MS Outlook® as can all missed calls, and dialing a call is as easy as clicking on the number in the call log.

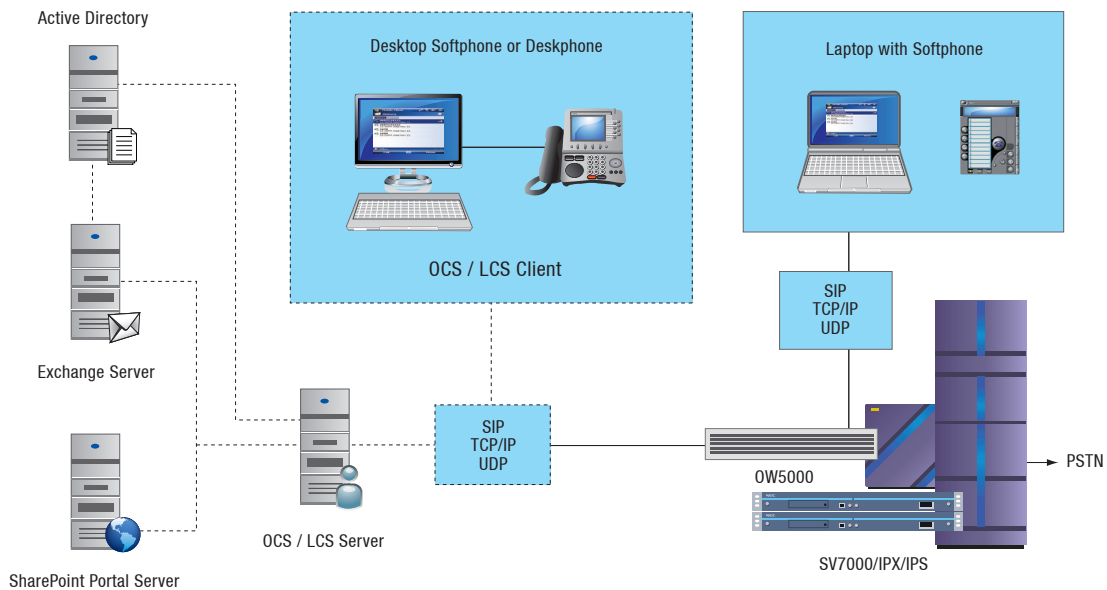

Microsoft's Office Communicator includes presence capability, which enables users to check the availability of people they want to talk to before placing calls from their phone or PC softphone. If a colleague is busy on a call, the user can "tag" that person, and the system provides notification as soon as the person is available.

The features listed here do not include the full set of enhanced presence capabilities available in a pure NEC solution, but it does include all functions that the Microsoft applications can process at this time.

Voice Platform Compatibility

- UNIVERGE SV7000 Communications Server
- UNIVERGE SV7000 Multiple Purpose System (MPS)
- UNIVERGE NEAX 2000 IPS
- UNIVERGE NEAX 2400 IPX
- UNIVERGE SV8300 Communications Server

NOTE: OCS interoperability and features require specific software levels on the voice servers.

UNIVERGE360 is NEC's approach to unifying business communications. It places people at the center of communications and delivers on an organization's needs by uniting infrastructure, communications and business.
